Steady Nano Tweezers

A sure hand tool for your finest soldering

NP105-B Steady Nano Tweezers

The best solution for soldering and desoldering extremely small-sized components such as chips 0201, 0402, 01005, etc.

Stable movement

A single axis system helps guide your hand and steadies your pulse.

Finger grip

The concave shape means a snug fit for your finger which prevents it sliding down the handle.

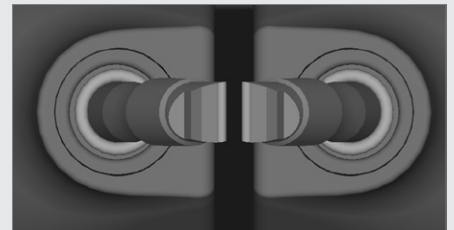

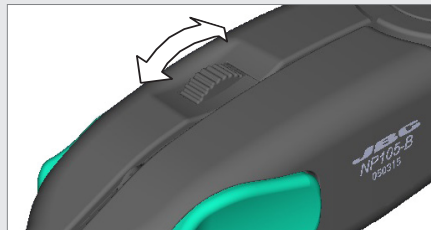

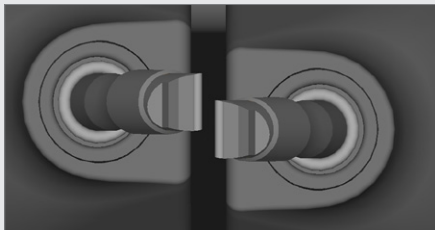

Shortest distance Tip-to-Grip

Provides greater manual control of the tool, including when using a microscope.

Vertical cartridge alignment

The screw guarantees a vertical alignment of the cartridges. One tip lines up with the other.

More Nano Tools to choose from

JBC supplies different tool models compatible with Nano stations which use the C105 Cartridge range.

NT105-A Nano Handle
